

SubDrives

We are now installing a surge protection unit into all new SubDrive 75, 150 and 300 enclosures.

This is a cartridge style surge and lightning arrestor (nothing is guaranteed, we are trying to minimise surge damage and related circuit board and Drive failure)

The cartridges are replaceable and we are supplying 2 spare cartridges in each enclosure. This way the site operator can change over the cartridges and they are back up and running fast.

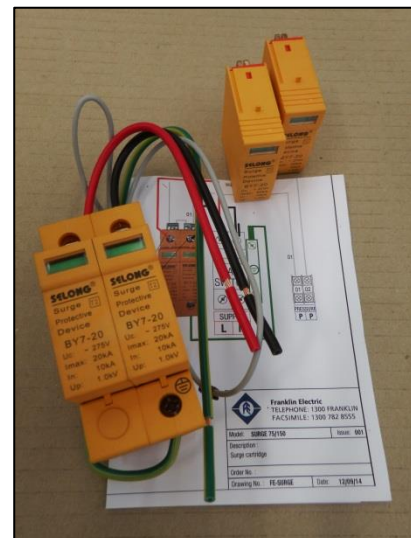

In addition, we have a Retrofit Surge Kit to upgrade any existing in field units if required.

Installed surge arrester in SD75
Cartridge indicator; Green is good, Red is blown

Replacement cartridge Kit
Contains 2 cartridges
Order # 305 701 377

Retrofit Kit
Surge Arrester with wiring loom,
connect diagram, spare cartridges
Order # 313 000 206

Note: Infield installation of the retrofit items should be done by an approved electrician
